🔥 SYSTEM FLOW (VERY IMPORTANT)

Login → Dashboard → Module Selection

↓

Branches ↔ Assets ↔ Services ↔ Audits ↔ Documents

⚠️ CRITICAL DESIGN RULES (DON'T IGNORE)

- Keep UI **simple and fast**
 - Avoid too many fields
 - Mobile-friendly (very important for audits)
 - Role-based access (finance vs others)
-

🚀 WHAT YOU SHOULD DO NEXT

Now you have **clear UI screens**, next step is:

👉 Option 1 (Recommended)

I design:

- Full **clickable wireframe (Figma-style)**
- Ready for developers

👉 Option 2

I create:

- **Database + API structure**
- So your developer can start coding immediately

👉 Option 3

I build:

- **Complete system flow document (SRS)**
→ This is what professional IT teams use
-

Just tell me:

👉 “Create Figma wireframe”

👉 “Create database + API design”

👉 “Create full SRS document”

I'll take you to the next level.
